Credit usage report (as of 2026-11-04)

Every free credit pool Walkdown used, what it was spent on and what it produced. Each figure names its source:

- **dashboard (2026-11-04)** / **dashboard (2026-11-01)**: the provider's billing page, read by the builder on that date (the 2026-11-01 readings are also in `docs/COST_LOG.md`).
- **CLI (2026-11-04)**: `modal billing summary` / `modal billing report`, run during the final audit.
- **ledger**: Walkdown's own cost ledgers, written from each call's `usage` at official list prices (`G:/walkdown-data/runs/cost_ledger.jsonl`, one ledger per clip, the F7 journal, the demo spend-guard files). A ledger figure is an estimate. Where a dashboard figure exists, the dashboard wins.
- **ledger (dashboard shows no explicit credit balance)**: Baseten's and Fireworks' billing pages do not show a credit balance for these grants (builder, 2026-11-04), and their APIs give no billing access to these keys (Baseten 403, Fireworks 404), so the ledger is the best available figure.

Summary

Pool	Granted	Used	Remaining	% used (target 80%)	Source of "used"
Meta Model API	$150.00	**$107.89**	**$42.11**	71.9%	dashboard (2026-11-04)
Baseten (Muse Spark Open)	$100.00	≈ $73.64	≈ $26.36	≈ 74%	ledger (dashboard shows no explicit credit balance)
Fireworks	$100.00	≈ $83.16	≈ $16.84	≈ 83%	ledger + Glimmer job logs (dashboard shows no explicit credit balance)
Modal	$100 hackathon credit (grant, `CLAUDE.md` brief) + $30/month free credit (Modal Starter plan, https://modal.com/pricing); $130 in October, $30 more on 2026-11-01	$32.14 metered in October (covered: credits $32.06 + egress allowance $0.08); $0.28 in November (storage, covered by free storage)	$127.94 balance on 2026-11-01	24.7% of the $130 available in October	CLI (2026-11-04); balance from dashboard (2026-11-01)
Hugging Face	free account	$0	–	–	free plan (private dataset for the demo bundle)
Render	free web service	$0	–	–	free plan, no card on file
Vercel	Hobby	$0	–	–	Hobby plan, no card on file

Total free credit used across the four paid pools: ≈ $296.8 (Meta $107.89 dashboard + Baseten ≈ $73.64 + Fireworks ≈ $83.16 + Modal $32.14).

- **Meta ($107.89):** every Cloud number in the README. That covers the 1,444-image test split end to end, the human audits, the public-negatives and Muse Image stress tests, the Muse Wonder study, 50 live agent runs, and every demo and example run.
- **Baseten (≈ $73.64):** the open-weights verifier on all 5,066 test candidates (93.4% agreement with hosted). It also paid for the On-prem false-alarm test (2.1%) and the Muse Spark Open teacher labels for the Glimmer distillation.
- **Fireworks (≈ $83.16):** the full 1,444-image On-prem benchmark (92.4% image detection, pixel P/R 0.78/0.62), the host comparison, and the Glimmer LoRA evaluation (training was free under a promotion).
- **Modal ($32.14):** SAM 3.1 open weights for On-prem mode, the FLUX look-alike negatives, both Glimmer QLoRA runs, and the SAM 3 fine-tune attempt (a negative result).

Below 80%: Meta (72%), Baseten (74%) and Modal (25%). The budget rule was "target $50–70 of Meta, hard stop $120", so the remaining Meta credit was kept as a buffer for the public demo (daily cap $5) rather than spent to reach a quota.

Meta Model API, by purpose (ledger, list prices)

Dates (IST)	Purpose	Models	Amount	What it produced
10-27	Development, smoke tests, SAM prompt dry runs ("corrosion", "corroded metal")	muse-spark-1.3, sam-3.1	$0.30	Request formats checked; prompt choice (RESULTS §1)
10-27	SAM 3.1 text prompt on dev 50 + test 1,444	sam-3.1	$3.74	RESULTS §1 (66% image detection)
10-27	Recall experiment: tiling and prompt unions (dev)	sam-3.1	$0.63	RESULTS §3 (negative result)
10-27 – 10-28	Verifier at scale: 5,066 text candidates, 5,385 box candidates, dev studies, 100-candidate audit verdicts	muse-spark-1.3	$45.57	RESULTS §2, §4, §8
10-27 – 10-29	Box proposals + SAM box prompts (dev design, test run, incl. the run before the clamp fix)	muse-spark-1.3, sam-3.1	$10.58	RESULTS §4 (97.9% image detection)
10-28	Muse Wonder senior review on 528 escalated candidates	muse-wonder-1.0	$8.32	RESULTS §5 (no accuracy gain; kept as a second opinion)
10-28	False alarms on 191 public negatives (Cloud, every verifier)	sam-3.1, muse-spark-1.3	$7.06	RESULTS §9 (12.0% / 6.8%)
10-28	Muse Image look-alike stress set, evaluation only (300 images)	muse-image-1.0	$3.00	RESULTS §10
10-29	Verifier hardening v1/v2 prompts	muse-spark-1.3	$2.60	RESULTS §11; the Balanced setting (93.8% / 6.8%)
10-29	Medium reasoning effort study	muse-spark-1.3	$9.13	RESULTS §12 (did not pay off)
10-29 – 10-31	F7: 50 live end-to-end agent runs	muse-spark-1.3, sam-3.1, muse-wonder-1.0	$10.70	RESULTS §15 (50/50; found the video-tracking bug)
10-27 – 11-02	Other agent runs: dev clip, stock-clip trials, demo cache, finished examples, voice note, UI checks	all of the above, muse-voice-transcribe-1.0	$4.34	Demo clips, examples, RESULTS §19
10-27 – 11-02	**Ledger total**		**$105.91**	
11-03	Deploy memory probes and public smoke test	muse-spark-1.3 (cached perception)	≈ $0.37	docs/DEPLOY.md
11-04	Final audit: 6 live demo runs (samples, own photos, own video, Balanced), a replan, copilot questions, a voice note	Meta	≈ $0.62	This audit
11-04	Final fix round: Balanced verdict caches for 2 samples (3 local runs), human-review tests, live review-flow checks, 7 copilot questions, one photo upload	Meta	≈ $0.42	Balanced caches in the demo bundle (HF commit b24b31e); P1/P2 checks
11-04	P3c partial run, stopped, not published (minimal effort on the test split; 22 of 1,444 images, journal kept on G:)	Meta	$0.16	Nothing published
	Public demo traffic from visitors	Meta	not separable	The demo spend-guard caps it at $5 per day

Reconciliation, 2026-11-01 to 2026-11-04. The dashboard moved from $105.54 to $107.89 (+$2.35). The logged lines since then add up to ≈ $1.64 (11-01/11-02 ≈ $0.23, 11-03 ≈ $0.37, 11-04 audit ≈ $0.62, 11-04 fix round ≈ $0.42). **≈ $0.71 is unattributed**: public demo traffic from visitors (not separable from the spend-guard files, which reset on every restart) plus the estimation error of UI-header and trace figures.

Reconciliation up to 2026-11-01. The ledger through 11-02 is $105.91; the dashboard read $105.54 on 2026-11-01. About $0.2 of the ledger's 11-01/11-02 lines came after the dashboard reading. That leaves **≈ $0.2 unattributed**, ledger

above dashboard. It is most likely list-price rounding and cached-token pricing in the ledger estimate. An earlier COST_LOG note put the ledger ≈ $4.5 above the dashboard, but that figure included hand-added COST_LOG lines that are also in the ledger; the per-call ledger is the cleaner figure.

Baseten (Muse Spark Open), by purpose (ledger)

Dates	Purpose	Amount	What it produced
10-27 – 10-28	Open-weights verifier on all 5,066 test candidates (incl. the dev dry runs and the 92-reply retry)	≈ $47.55	RESULTS §6 (93.4% agreement)
10-28	Teacher labels: 1,309 open-weights candidates on the clean train pool	≈ $10.95	Glimmer distillation data (RESULTS §14)
10-28	False alarms on 191 public negatives, On-prem (box proposals + verifier) and the all-verifier run	$11.57	RESULTS §9 (2.1%)
10-28	On-prem box proposals, dev check (50 images)	$0.60	RESULTS §7
10-28	On-prem agent runs on the dev clip (F2)	$0.63	RESULTS §7, On-prem mode
10-29	Verifier hardening v2 with Muse Spark Open	$2.35	RESULTS §11
	Ledger total	**$73.64**	

COST_LOG's hand total was ≈ $75.4. It adds about $1.0 for the box-only audit fill and ≈ $0.7 of F2 and agent estimates that partly overlap the ledger. **Unattributed: up to ≈ $1.8** (no Baseten dashboard to settle it).

Fireworks, by purpose (ledger and job logs)

Dates	Purpose	Amount	What it produced
10-29	Muse Spark Open on a second host: 100 test candidates	$0.90	RESULTS §6 (host comparison)
10-29 – 10-31	On-prem full test split: box proposals ($17.11) and verification ($64.26) on 1,444 images	$81.37	RESULTS §7 (92.4%, pixel P/R 0.78 / 0.62)
10-29	On-demand deployment probe (refused: a payment method is required)	$0.00	Decision: no Fireworks deployments
10-31	Glimmer LoRA, Serverless Training: training $0 (promotion); evaluation sampling on 318 rows	$0.89	RESULTS §14 (99.1% audited recall)
	Total	**$83.16**	

Modal, by app (CLI billing report, 2026-10-05 to 2026-11-05)

Dates	App	Amount	What it produced
10-28	walkdown-sam31: SAM 3.1 open weights (probes incl. a crash loop, teacher masks, negatives, F2)	$2.46	On-prem perception; teacher labels
10-29	walkdown-sam31: On-prem test-split SAM calls	$1.05	RESULTS §7
10-28	walkdown-flux: FLUX.1-schnell look-alike negatives	$1.04	Training negatives (Glimmer, SAM 3 attempt)
10-28	walkdown-glimmer: weights to volume, Glimmer v1 QLoRA training and evaluation, the orphaned H100	$13.16	RESULTS §14 (v1)
10-31	walkdown-glimmer: Glimmer v2 training and evaluation, plus the cancelled first attempt	$12.34	RESULTS §14 (v2: −39% clean-pipe alarms, 94.7% recall, not adopted)
10-31	walkdown-sam3ft: SAM 3 base evaluation and 9 fine-tune attempts (non-finite values)	$2.09	RESULTS §18 (negative result)
	Network egress	$0.08	–
	October metered	**$32.14**	Covered by credits ($32.06) and the egress allowance ($0.08)
11-01 – 11-04	Volume storage	$0.28	Covered by free storage

The local Modal ledger has only $2.53, because GPU training jobs were not ledgered per call. The CLI billing report is the source here; there is **no unattributed Modal spend**.

Failed or wasted spend, and what it led to

Pool	What	Amount	Lesson / safeguard
Modal	Orphaned H100: the local memory guard killed the client during model load; the remote GPU ran 21:06–21:09 IST until stopped	≈ $0.2	Every GPU job runs `modal run --detach` with a hard timeout; apps and containers are checked after every job
Modal	Crash loop on a missing dependency (`psutil`, 13 container starts)	$0.06	A CPU import check before any GPU run
Modal	SAM 3 full fine-tune: 9 attempts, all ended in non-finite values	$2.09	Stopped at 9 attempts under a $25 cap; reported as a negative result; SAM 3.1 kept
Modal	Glimmer v2 first attempt, cancelled when the guard killed the local client	≈ $1.7	Long jobs are spawned on the deployed app, not tied to a local client
Baseten	55 images run at max_tokens 8,000, set aside and redone at 4,000 so all candidates share one setting	$3.84	One token setting per benchmark; retries only for invalid replies
Meta	Medium-effort study: no gain over minimal/low	$9.13	Verification stays at minimal (High recall)
Meta	Box-proposal run before the box clamp fix	part of $10.58 (not separable)	Boxes are clamped to the image before SAM
Meta	A finished-example build with a broken clip loader	$0.03	Example round-trip test (`tests/test_demo.py`)
Meta	F7: 4 runs paid a crashing `track_video` call again on every run	< $0.05	Bug fixed with a test; found because F7 ran live
Fireworks	Deployment probe	$0.00	Refused without a card; no deployments used
